Woodsfield Glulam Manufacturing are set to take awareness of Gluelam to the next level in Malaysia and in doing so are gaining world recognition for their project innovations. The picture representation above is '3 Dome', a University campus to be fully constructed using local species hardwood Gluelam. Woodsfield are setting the benchmark for Gluelam innovation and the 3 Dome will no doubt become an iconic representation of their creativity, attention to detail and enduring quality. Dr Clarence Tan stated that due to the severe climatic conditions of full weather exposure in tropical Malaysia, they required a trusted, high performance wood protection

option. Woodsfield have specified CUTEK Extreme which has a 30 year high performance history on wood in the most severe climates and has outperformed other coatings and oils on high profile Gluelam projects globally.

Dr Tan went on to say, "in choosing CUTEK Extreme we wanted the 3 Dome to be well protected long term while having a very fast and easy maintenance option. We like the fact that no sanding or chemical stripping will ever be needed.

We were also very impressed at how well CUTEK penetrated this very dense Malaysian hardwood species. We will apply 1 x coat to all Gluelam components at our factory and

a further two coats after install".

Woodsfield are constructing an amazing GlueLam project to represent Malaysia at this years World Expo in Milan Italy. Once again CUTEK has been specified.

Watch this space for many more project innovations by Woodsfield.
